BREAK THE MOVEMENT

CREATE YOUR FLOW

FREE GUIDE

Understand your body. Explore movement. Create your own flow.

PAGE 1 — WHAT IS FLOW?

What does Flow mean to me?

For me, Flow is the ability to move through different levels, different movement qualities, and movements that may not seem directly connected, while transitioning between them in an effortless way.

It is about connecting movements smoothly and naturally, without making them feel disconnected from one another.

But the most important part is not simply knowing more movements.

It starts with knowing your body.

Instead of focusing on specific or difficult movements, I believe it is much more important to first understand the fundamental positions of your body and how to transition between them.

Because creating your own Flow starts with **understanding your body and how it moves.**

PAGE 2 — FUNDAMENTAL BODY POSITIONS

To create your own Flow, I recommend first understanding the fundamental positions of the body.

For example:

- Sitting
- Lying on the floor
- Crawling
- Squatting
- Standing
- Upside-down positions

The goal is not simply to perform these positions individually.

The real goal is to understand:

How can you transition from one position to another?

For example:

Standing → Squatting → Floor → Crawling → Sitting → Standing

The more comfortable and controlled you become with these transitions, the easier it becomes to connect different movements.

From there, you can begin combining these fundamental movements with movements from your own discipline and gradually develop **your own movement language.**

PAGE 3 —

MOBILITY & PREPARING THE BODY

Before working on Flow, make sure your body is properly prepared.

For me, warming up is not simply about doing a few stretches.

Warming up means waking up the joints through their natural ranges of motion, using enough repetition and circular movements.

I like to combine this with breathing, using slow and controlled movements to gradually bring the body to life.

The goal is to:

- Prepare the joints for movement
- Improve mobility
- Wake up the body
- Connect breathing with movement
- Gradually increase your heart rate

This helps your body adapt more easily to sudden changes in level, speed, or dynamics without unnecessary resistance.

Prepare the body first. Then begin to explore.

.

PAGE 4 —

STEP 1: IMPROVISATION

Once your body is prepared, begin improvising.

There is one important thing to remember here:

There is no specific amount of time.

Every day, our bodies feel different.

Our energy, mood, physical condition, and desire to move can all change from one day to another.

So instead of thinking about a specific movement or discipline, try to put your thoughts in the background and **start moving.**

Move first.

Then observe what your body needs in that moment.

If you enjoy a movement, repeat it.

If a position feels natural, stay there a little longer.

Follow the connections that your body naturally creates.

The goal is not to look perfect.

The goal is to **start communicating with your body.**

PAGE 5 —

STEP 2: EXPLORE ONE MOVEMENT

During your improvisation, choose a movement that naturally appears or simply catches your attention.

Now return to that movement again and again.

But don’t try to perform it exactly the same way every time.

Instead, change:

- The way you enter the movement
- The way you exit the movement
- The direction
- The level
- The speed
- The rhythm

For example, imagine repeating the same movement.

But every time, you enter it from a different position and exit into a different movement.

After some time, your body will naturally begin creating new connections.

This is where Flow starts to develop.

PAGE 6 —

STEP 3: FIND THE PATTERN

As you continue exploring a movement, you may notice that your body naturally prefers certain connections.

One movement → another movement → another transition.

When that connection starts repeating, a **movement pattern** begins to form.

Once you recognize that pattern, try to extend it.

For example:

A → B

Then:

A → B → C

Then:

A → B → C → D

Now begin repeating the pattern you have created.

The goal is to eventually perform these connections **without overthinking them and without unnecessary effort.**

An important part of Flow happens here:

Moving instead of thinking.

PAGE 7 —

CHANGE, REPEAT, EXPLORE

Once you create a pattern, you don’t have to stay attached to it.

Try exploring the same pattern in different ways.

Level

High, low, or on the floor.

Speed

Slow, medium, or fast.

Dynamics

Fluid, controlled, or explosive.

Direction

Forward, backward, sideways, or through different angles.

Concept

Try same shapes with different movements.

You can apply all of these variations to the fundamental movements of your discipline.

The goal is not to find one “correct” Flow.

The goal is to discover as many connections as possible within the same movement.

PAGE 8 —

THERE IS NO FINISHING POINT

One of the most beautiful things about Flow is this:

Flow has no final form.

You can create one Flow.

You can create one movement pattern.

You can create many different Flow patterns.

You can use them:

- While dancing
- During training
- In freestyle
- On stage
- While exploring new movements

But you never have to stay attached to any of them.

You can change the Flow you created today tomorrow.

You can remove a movement, add a new one, or discover a completely different connection.

You can always rediscover.

PAGE 9 —

FLOW IS A JOURNEY

Today, there are countless workout programs, training systems, and hybrid movement programs available.

As someone who has been dancing professionally for years and continues to move and train today, I have seen firsthand how many doors Breaking can open through movement.

And I continue to discover something new every day.

Because movement has no final destination.

One movement can lead to another.

One idea can lead to another.

One Flow can become another Flow.

It truly is a never-ending journey.

And sharing what I have learned throughout this journey with you is something that means a lot to me.

PAGE 10 — FLOW

Flow is not a pattern you have to memorize.

Flow is a process you continue to explore.
